ENDERMOLOGIE
The anti-cellulite treatment clinic...

LPG

What is cellulite?

Essentially a feminine phenomenom, cellulite results from a build-up of fat in the adipocytes (subcutaneous fat cells) and the retention of water in the surrounding areas (dermis and hypodermis). As the adipocytes continues to grow, the envelopes containing them lose their shape and pull on their cutaneous anchoring points, giving the skin its "orange peel" appearance. At this stage, the main problem is that the process is self-substaining as a result of a reduction in blood circulation, causing in turn stagnation of metabolic waste, nutritional impoverishment and congestion of the connective tissue, which loses its elasticity and becomes fibrous. This extremely unsightly condition results in cellulitic areas that are unresponsive to physical exercise and to even the strictest slimming diets.

At what stage is your cellulite?

Without adequate treatment the orange peel effect settles in and tends to worsen over time. On the buttocks and thighs one can distinguish four stages of celluite:

0 > The skin has a smooth aspect without any irregularities on the surface, whatever the position or pinching applied.

1 > The skin has an orange peel aspect only when pinched or in a seated position on a hard surface.

2 > The orange peel aspect is visible in a standing position, the smooth aspect is visible in a lying down position .

3 > The orange peel aspect is permanent and appears naturally whether in a standing or lying down position.

7 Questions
about Endermologie...

Is it new? LPG has been in use for over fifteen years; sessions can be counted in their millions, and with everyday that passes tens of thousands of women feel the benefits.

Is it painless? This is a personalised treatment adapted to the skin sensitivity of each individual patient, it is never painful.

Does it help you lose weight? Endermologie acts on the cellulite as well as on the quality and appearance of the skin; this may be accompanied by some weight loss.

Can it replace a diet? Whilst a sensible diet can help you to maintain a healthy weight, Endermologie acts effectively on cellulite and on body shape and volume.

Is it more effective than sport? Sport is obviously very beneficial, but it can't fight cellulite. So you need to combine sport with a course of Endermologie treatment.

Can it replace liposuction? Liposuction techniques are designed to help with body shape and volume, but they can't solve problems of cellulite and skin appearance. Consequently, Endermologie is an excellent complement to plastic surgery.

Has the effectiveness of the technique been prooven scientifically?

The results obtained by the LPG technique have been confirmed by scientific studies conducted in leading American and European universities.

The ONLY system clinically proven to treat cellulite

The Advertising Standards Authority (ASA), which regulates all slimming claims made for products, says: 'Advertisers cannot claim that a treatment can specifically target "cellulite". The only exception the ASA makes to its rule on cellulite claims is for a treatment called Endermologie."

IPL™
intense pulsed light technology
PHOTOREJUVENATION

Helps restore your youthful look...

Remarkable new Intense Pulsed Light (IPL™) improves the appearance of photo-aged skin on the face & body with no down time.

By treating broken capillaries, and age spots (spots-induced freckles), IPL creates smoother looking skin through a process called Photorejuvenation. Non-laser Photorejuvenation is far more effective than creams, medications, or conventional lasers. We now offer these brief treatments with no "down time" at all.

Skin Treatments Using Photorejuvenation - IPL for sun-damaged skin...

Red blemishes from broken blood vessels and brown spots of pigment from the sun damage respond to intense Pulsed Light. The light is changed to heat energy as it reaches to the level of the collagen beneath the skin surface.

Introducing the light that Erases Skin Damage

What is Intense Pulsed Light?

Intense Pulsed Light (IPLTM) technology is a treatment breakthrough that can correct a variety of benign skin conditions, such as facial skin imperfections, the signs of aging, birthmarks, unwanted hair, unsightly small veins, and other blemishes. It offers a safe, non-invasive solution that can be tailored to your individual condition and skin type, providing superior cosmetic results and outstanding satisfaction. This new procedure is called Photorejuvenation.

Achieve Beautiful Skin with IPL™ Photorejuvenation

Photorejuvenation, the revolutionary new, non-invasive technology using Intense Pulsed Light (IPLTM) can achieve remarkable results in 30 minute sessions.

The celebrities' treatment is now available to you:

- A fraction of the cost of conventional surgery.
- No surgery, no needles, no anaesthetic.
- No 'downtime' - return to normal activity immediately.

Rosacea - erases 'blushing' and redness of the face, neck and chest.
Photorejuvenation - improves the texture of your skin. Reverse the signs of ageing - sun damage, hyperpigmentation and fine lines.

EpiLight®
Hair Removal Clinic

DEPILEX

We highly recommend an offer full and honest consultation free of charge, when at this point we will explain and advise you about the cost involved. est. 25 years

Depilex Health & Beauty Clinic - Epilight Hair Removal Clinic

...Unveil the real you!

Imagine...

EpiLight®

No more waxing, no more plucking, no more shaving, no more tedious & painful electrolysis. Just the sheer joy of knowing that your skin feels smooth, soft, clean, and hairless, and the sense of confidence and well-being that comes from finally having your unwanted hair thing of the past. Guaranteed.

Then welcome to reality at the Depilex Epilight Clinics - the United Kingdom's and Europe's longest providers of hair removal treatments and Epilight Hair Removal system.

Any area of the face and body can be treated successfully.

All our consultants are professionally trained in the application of the Epilight technology and are fully conversant with all the medical and cosmetic reasons for unwanted hair. Each client can therefore be assured of a personal consultation from a highly skilled consultant with a knowledgeable, sympathetic and confidential approach.

Our policy is to deliver the highest standard of performance in every aspect of our services.

What the Experts say

"Epilight gives us light of many colours, which allows us to treat all hair colours and nearly all skin colours. The years people dealing with plucking, shaving, electrolysis and waxing are over - after the Epilight treatment, large areas of hair are gone with great results"

David J Goldberg, MD, Chief of Dermatalogical Surgery, New Jersey Medical School, Newark, New Jersey, USA.

"What makes Epilight the most advance tool today to treat excess hair is that it is the only system that has the versatility required to do the job. Single wavelength lasers are unable to treat different hair colours, textures, depths and skin types. Epilight can do that as well as treat a large area and affect over 100 hair follicles in each pulse with minimal patient discomfort"

Michael Scheflan, MD, Plastic Surgeon and Laser Specialist, Herzliya, Israel

"We have achieved excellent results. Hair is safely and effectively removed, even on patients who have not responded to electrolysis treatments. Before Epilight, removal of dense hair from huge areas like the back was impossible. Now, the extremely large footprints of each pulse allows rapid treatment of large body surfaces."

Margaret and Robert Weiss, MD, Associate Professors of Dermatology, John Hopkins University and Private Practise, Hunt Valley, Maryland, USA.

Some of the areas successfully treated include:

- Face
- Arms
- Chest
- Nipple area
- Bikini Line
- Brazilian Bikini
- Shoulders
- Neck
- Under Arms
- Back
- Beard
- Stomach
- Upper Lip
- Legs
- Nose & Ears
- Buttocks
